

ABSTRACT:

In an arrangement including a remote control device and at least a first electronic device, said remote control devices having a first memory for storing a set of code data for controlling a further electronic device, which first memory is connected to an input of a signal generator to supply said code data to said input, which signal generator is adapted to generate, on the basis of said code data, control signals for controlling said further electronic device, and to transmit said control signals to said further electronic device, said first electronic device having a data input arranged to receive data from said remote control device, said remote control has a code data output unit connected to said first memory, said code data output unit having a further input for receiving an upload signal and being adapted to read, under control of said upload signal, at least a subset of said set of code data from said memory, said code data output unit being further adapted to transmit said subset burstwise to said data input of said first electronic device, which first electronic device includes a second memory for storing a received subset.
